

Features

- 4" x 2" miniature size
- 48Vdc input (20~55Vdc)
- 3-phase switches with sensors in one unit for external control (control board VFD-CB sold separately)
- High peak current up to 200% and 5 seconds
- Fanless design for silent operation and long lifetime
- Protections : Short circuit / OCP
- Internal sensors feed out for control :
Current sensor - motor torque control
DC bus voltage sensor - OVP/UVLP
Temperature sensor - OTP
- -30~+70°C wider operating temperature
- Suitable for 3-phase motor drive (e.g. BLDC, Induction motor, SynRM)
- 3 years warranty

Applications

- HVAC
- Fan
- Water/Air pump
- Power tools
- Conveyor
- Automatic door
- Fitness equipment

Description

The VFD-250P-48 is an universal variable frequency drive power module providing integrated 3-phase switches with gate drivers and basic VFD sensors such as three phase output current and temperature sensors. This product can be implemented for a three phase motor drive solution by coordinating with an external motor drive controller in logic level and analog I/O. The three phase motor output is supported up to 55Vdc with 200% peak current capability. The compact size of 4"x2" and fanless design makes it easy to be integrated into all kinds of motor system. The VFD-250P-48 is suitable for three-phase motor drive, such as BLDC, Induction motor, and SynRM applications.

Model Encoding

VFD - 250 P - 48

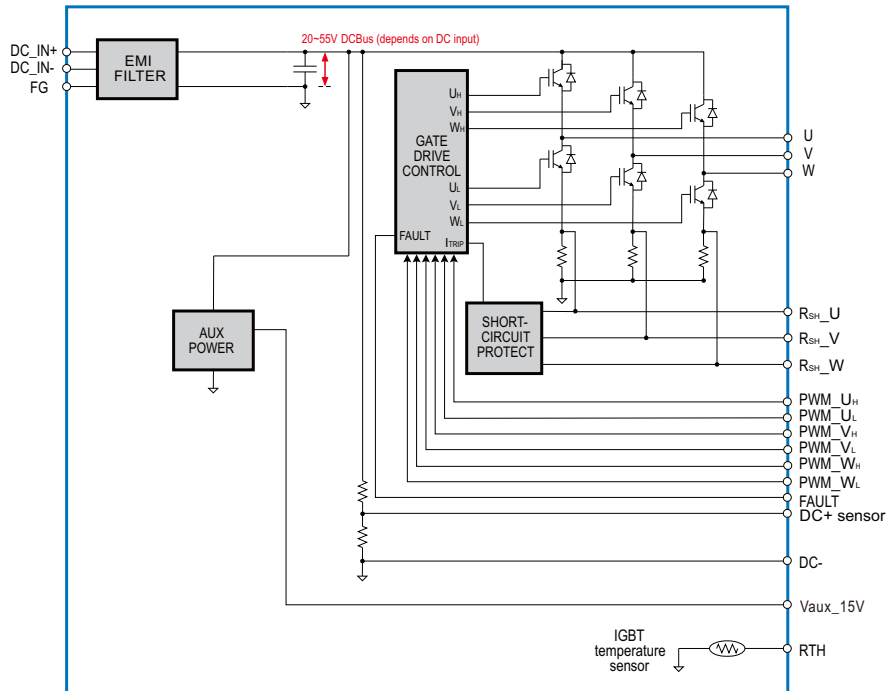

SPECIFICATION

MODEL NO.		VFD-250P-48	
OUTPUT (Note1,2,3,4)	VOLTAGE RANGE(UVW)		55V Max, line-to-line voltage 0~34V adjusted with modulated PWM, suitable for 48V class motor.
	CURRENT	Rated	7.2A
		Peak	14.4A for 5 seconds
	RATED POWER		350W
	EFFICIENCY		93%
	PMW FREQUENCY		2.5KHz ~ 15KHz
INPUT	RATED INPUT VOLTAGE		20 ~ 55VDC
	RATED INPUT CURRENT		5.6A /48VDC Typ.
FUNCTION (Note.5)	3-PHASE PWM CONTROL		PWM control signal to gate driver for IGBTs. (CN93, PIN8~13) 3.3V TTL/CMOS input : High (>2.7V) : IGBT ON ; Low (<0.4V) : IGBT OFF
	3- PHASE PWM CONTROL		Built-in 6mΩ low-side shunt resistor (each phase), (CN93, PIN4~6)
	DC BUS VOLTAGE SENSOR		DC BUS voltage sensor output(DC+ sensor, CN93 of PIN1): 2.5V@DC BUS 48V
	THERMAL SENSOR		Built-in 10KΩ NTC for sensing IGBTs operating temperature. (TSM2A103F34D1R (Thinking Electronic), PIN3 of CN93)
	FAULT SIGNAL		Inverter fault signal(Short circuit/OCP, CN93,PIN7). 3.3V TTL/CMOS output : Normal High (>3V) ; Abnormal : Low (<0.5V)
	AUXILIARY POWER		Non-isolated 15V output power for external control board (CN93, PIN14 to PIN2) 15V @ 0.2A ; Tolerance ±0.5V, Ripple 1Vp-p max
PROTECTION	SHORT CIRCUIT		Protection type : Shut down o/p voltage, re-power on to recover
ENVIRONMENT	WORKING TEMP.		-30 ~ +70℃ (Refer to "Dreating Curve")
	WORKING HUMIDITY		20 ~ 90% RH non-condensing
	STORAGE TEMP., HUMIDITY		-40 ~ +85℃, 10 ~ 95% RH non-condensing
	VIBRATION		10 ~ 500Hz, 2G 10min./1cycle, period for 60min. each along X, Y, Z axes
SAFETY & EMC	SAFETY STANDARDS		CB IEC61800-5-1,TUV/BS EN/EN61800-5-1,EAC TP TC004 approved
	EMC EMISSION	Parameter	Standard
		Conducted	BS EN/EN IEC61800-3
		Radiated	BS EN/EN IEC61800-3
	EMC IMMUNITY	BS EN/EN IEC61800-3, second environment	
		Parameter	Standard
		ESD	BS EN/EN61000-4-2
		Radiated	BS EN/EN IEC61000-4-3
		EFT/Burest	BS EN/EN61000-4-4
		Surge	BS EN/EN61000-4-5
		Conducted	BS EN/EN61000-4-6
		Magnetic Field	BS EN/EN61000-4-8
OTHERS	MTBF		3826.9K hrs min.Telcordia SR-332 (Bellcore) ; 301.4K hrs min.MIL-HDBK-217F (25℃)
	DIMENSION (L*W*H)		101.6*50.8*28.6mm
	PACKING		0.09kg;96pcs/9.64kg/1.44CUFT
NOTE	1. 3-phase 48V motor is recommended. Please consider the rated current when used for 12V/24V class motor. 2. Refer to peak current capability in "V/I curve". 3. Efficiency is tested with inductive load at rated current and full power. 4. All parameters NOT specially mentioned are measured at 48VDC input, rated load and 25℃ of ambient temperature. 5. Please refer to"Functional Manual" for more details. ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

Function Manual

1. 3-phase PWM Control (CN93, PIN8~13)

VFD-250P-48 provides six-switch circuit by using 3 half-bridge IGBTs. IGBTs of each phase is controlled by PWM_U_H/U_L, PWM_V_H/V_L and PWM_W_H/W_L (PIN 8~13). The input requirement for PWM is compatible with both TTL and CMOS 3.3V signals. Please refer to the diagram below.

WARNING: It is necessary to keep minimum dead-time 300ns between the upper and lower switch of each phase.

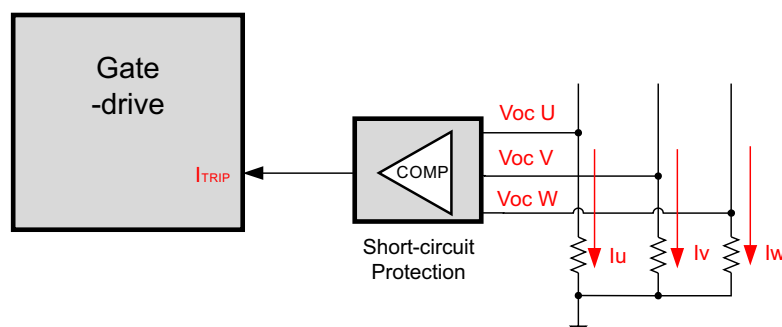

2. 3-phase Current Detection & Overcurrent Protection (CN93, PIN4~6)

Low-side shunt resistors 6m Ω are installed on each phase of VFD-250P-48 for current measurement and short-circuit detection. It's suggested to shorten the length of external detection circuit and detect the signal with a OPAs. Please refer to diagram below.

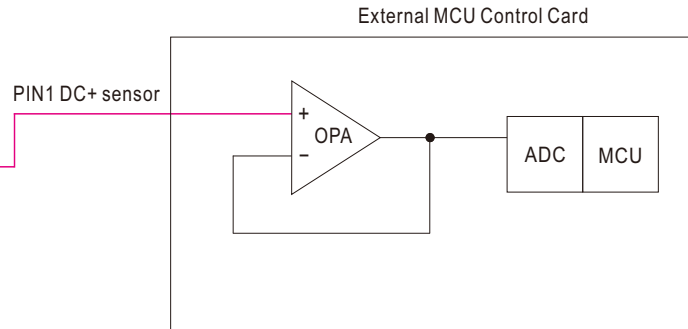

If output current exceeds 200% of rated value, the internal protection circuit will be triggered and shut down the gate driver for protection.

3. DC BUS Voltage Detection (CN93, PIN1)

VFD-250P-48 is built-in with DC bus voltage sensor(DC+ sensor, PIN 1). The sensor provides a 2.5V output when DC bus voltage is at 48V. It's suggested to detect the signal by OPAs. When the voltage of the DC bus exceed 60V, the PWM input signal must shut down for protection.

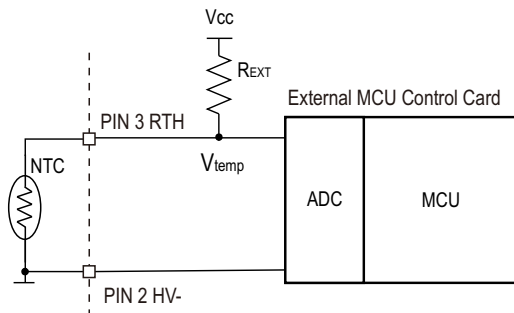

Equation for DC bus voltage calculation:

$$V_{DC\text{ BUS}} = \frac{48 \times \text{DC+sensor}}{2.5}$$

4. IGBT Temperature Detection (CN93, PIN3)

VFD-250P-48 is built-in a NTC resistor for detecting MOS temperature. Users can detect MOS temperature for protection (NTC type: TSM2A103F34D1R, Thinking Electronic). The recommended detection circuit is below. It's suggested to shutdown the PWMs input, if the temperature is above 115°C.

$$V_{temp} = V_{cc} \times \frac{R_{NTC}}{R_{EXT} + R_{NTC}}$$

T _{NTC}	R _{NTC}	V _{temp}
45°C	4.88KΩ	2.47V
115°C	0.69KΩ	0.61V

5. Fault signal

The FAULT signal would be active(active-low) to notify external controller or circuit, if VFD-250P-48 encounter the overcurrent state and keep the state for minimum overcurrent tripping time

t _{Tripmin.}	1us

Mechanical Specification

(Unit: mm , tolerance ± 1 mm)

AC Input Connector (CN1) : JST B2P-VH or equivalent

Pin No.	Assignment
1	DC INPUT +
2	DC INPUT -

Mating housing: JST VHR or equivalent
Terminal: JST SVH-21T-P1.1 or equivalent

PWM Output Connector(CN2): JST B6P-VH or equivalent

Pin No.	Assignment
1,2	U
3,4	V
5,6	W

Mating housing: JST VHR or equivalent
Terminal: JST SVH-21T-P1.1 or equivalent

Control Pin NO. Assignment (CN93) : HRS DF11-14DP-2DS or equivalent

Pin No.	Assignment	Pin No.	Assignment
1	DC+ sensor	8	PWM_W _H
2	DC-	9	PWM_W _L
3	RTH	10	PWM_V _H
4	R _{SH} _U	11	PWM_V _L
5	R _{SH} _V	12	PWM_U _H
6	R _{SH} _W	13	PWM_U _L
7	FAULT	14	V _{aux_15V}

Mating housing: HRS DF11-14DS or equivalent
Terminal HRS DF11-14SC or equivalent

※Control Pin No. Assignment(CN93) :

Pin No.	Function	Description
1	DC+ sensor	DC BUS voltage sensor output 2.5V, reference to pin 2(DC-)
2	DC-	DC BUS voltage sensor output ground
3	RTH	Temperature sensor
4	R _{SH-U}	U phase current sensor output
5	R _{SH-V}	V phase current sensor output
6	R _{SH-W}	W phase current sensor output
7	FAULT	Over current detection. Normal > 3V, Abnormal < 0.5V
8	PWM_U _H	W phase high side logic input, on > 2.7V ; off < 0.4V
9	PWM_U _L	W phase low side logic input, on > 2.7V ; off < 0.4V
10	PWM_V _H	V phase high side logic input, on > 2.7V ; off < 0.4V
11	PWM_V _L	V phase low side logic input, on > 2.7V ; off < 0.4V
12	PWM_U _H	U phase high side logic input, on > 2.7V ; off < 0.4V
13	PWM_U _L	U phase low side logic input, on > 2.7V ; off < 0.4V
14	Vaux_15v	Auxiliary voltage output 15V reference to pin2 (DC-). The maximum load current is 0.2A

Application

Application example: BLDC drive application

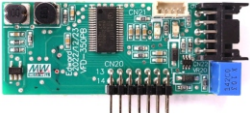

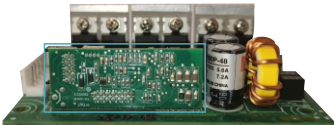

- 1.The figure shows the BLDC drive system which set up with VFD-250P-48.
- 2.Developers can control the PWM signal of 6-switch by using SPWM or SVPWM, etc. for 3-phase voltage modulation, and build the control method base on the current shunt sensors on 3-phase low-side switch(R_{SH-U/V/W}) and the DC BUS voltage sensor(DC+ sensor) which provided by VFD-250P-48.
- 3.Developers select the appropriate BLDC position sensors such as encoder or Hall-effect sensors to fit their applications.
- 4.It's suggested to install the brake circuit/device at the DC input for avoiding the DC BUS OVP when BLDC is decelerating.
- 5.It's suggested to shut down the PWM input or connect to brake resistor device for safety when DC Bus voltage is higher than 60V.
- 6.If VFD-250P-48 were applied non-appropriate control, such as accelerating too quickly or bad current control, it might trig the VFD-250P-48's fault-state to shut down the output voltage(low-level on FAULT pin).

■ Accessory List

If you have any control requirement of specific application, please consult MEAN WELL for more details.

Motor control board ([Motor control board and VFD drive module should be ordered separately](#)):

MW's order No.	Control Board	Assembly Suggestion	Quantity
VFD-CB			1

■ Typical Application

- ① Variable Frequency Module (VFD series)
- ② Control board of Variable Frequency Drive (Designed by User or Solution Provided by MEAN WELL)
- ③ 3-phase Pump Motor

- ① Battery
- ② Variable Frequency Module (VFD series)
- ③ Control board of Variable Frequency Drive (Designed by User or Solution Provided by MEAN WELL)
- ④ 3-phase Wheel Motor for AGV Application

- ① Variable Frequency Module (VFD series)
- ② Control board of Variable Frequency Drive (Designed by User or Solution Provided by MEAN WELL)
- ③ 3-phase Fan Motor
- ④ HEPA for Filtering Air

■ DEMO KIT

Please contact MEAN WELL for more detail.

VFD Demo Kit Main Function and Features.

- ① Built-in VFD-350P-230 and 230V motor.
- ② Motor start /stop/ forward/ reverse/speed control.
- ③ Motor start /stop/forward /reverse indicator right.
- ④ Motor speed (RDM)display.
- ⑤ Control board replaceable.
- ⑥ Support external motor connection.
